

NENIX CORPORATION:

Smart and Secure™ Web Access Management Solutions

“Incorporating SentryAccess into our product line will enable SDSA to expand its business reach into other markets and industries where single sign-on or access management and control are requirements of an integrated solution.”

Esther Lee,
 Director - Sales & Marketing
 Samsung SDS

COMPANY OVERVIEW

Nenix Corporation is the creator of SentryAccess, a powerful utility that enables organizations to securely and effectively manage users and the resources they need. Nenix merges Web standards technology with exceptional customer support to deliver the industry’s first all-in-one solution of its kind. Nenix’s solution was specifically formulated to meet the needs of small-to-midsize corporations, yet is robust and scalable enough to support large-scale user deployments. Nenix supplies its secure Web access management solutions primarily through a growing, worldwide channel network. Founded in Santa Clara, California in 2002 with four employees, Nenix has grown to 15 employees located in three countries.

Year Founded:
 2002

PRODUCT OVERVIEW

Nenix SentryAccess is a lightweight software solution that increases security, reduces administrative complexity and costs, and enables customers to focus on growing their businesses. SentryAccess was created using Web services technology. This simple philosophy makes it remarkably easy to integrate SentryAccess into even the most diverse environments – without requiring significant hardware or capital investments.

Three networked components – the SentryAccess Manager, SentryAccess Agent, and the SentryAccess Server – work together provide a solid single sign on and access management solution. With SentryAccess, registered users are able to navigate across domains to access the resources and materials they have permissions for, without needing to resubmit login credentials. This directly impacts an organization’s bottom line, as more than one-third of all IT help desk calls are for password resets.

SOLUTION FEATURES

SentryAccess delivers an abundance of product features that provide for efficient management of system users and protected resources.

Secure Authorization

- Dynamic User Authentication
- Two-Factor Authentication Support
- Multi-Domain SSO
- 3-Tier Architecture

Audit and Alarm

- Real-Time System Monitoring
- Strong Reporting
- Configurable Alarm
- Java Monitor Software

Manageability

- Unified Security Policy
- Delegated Administration
- Remote Operation

Customized User Access

- Privilege Management
- Advanced Password Management
- Fine-Grained Access Control
- Role-Based Control to Applications

Development Support

- Multiple Platform Support, including Windows, Linux and Unix environments
- SDK, APIs
- Self-Test Tools

Load Balancing

- Multi-Level Cache Support
- Fail-Over
- Round-Robin

SENTRYACCESS BENEFITS

With SentryAccess organizations can:

Save Time and Money

- by deploying a comprehensive, all-in-one solution
- by reducing the overall IT load as well as the number of IT calls for reset passwords

Efficiently Manage Users and Resources

- across heterogeneous platforms
- with support for multiple user directories and applications
- by applying uniform security policies across protected resources
- by creating virtual ISPs, multi-service portals, or dynamic user authentication through an integrated administrative interface

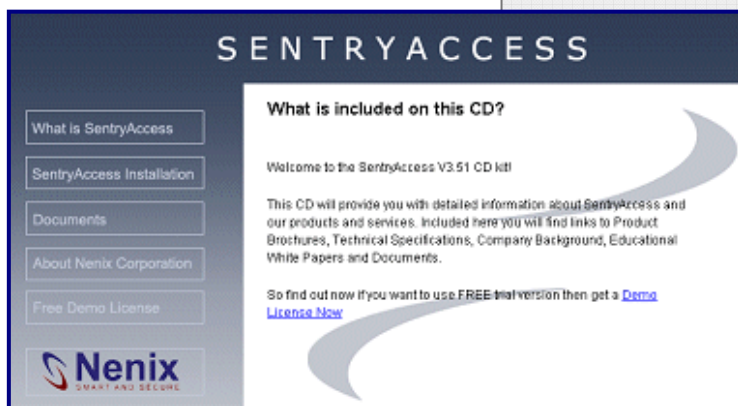

Gain a Competitive Advantage over the Competition

- by shortening the time-to-market for deploying ebusiness applications
- by focusing on growing the business instead of on access management

“With Nenix... we got everything we needed: authentication, access control, with easy-to-use auditing, logging, and reporting tools included. Protecting resources and assigning user groups is [easy].”
